this book provides a breadth and depth of innovative and impactful research led by women investigators in the field of renewable energy this book showcases the diversity of renewable energy solutions being deployed commercially in the united states and internationally including new research underway the chapters collectively cover the entire spectrum of large utility scale to small distributed scale renewable energy technologies as well as new operating practices in buildings necessary to fully capture the value of renewable energy the chapters also discuss technical and market considerations of renewable energy resources plus customer attitudes and acceptance these topics touch on many of the challenges facing the world today and these solutions by women researchers are valuable for their technical excellence and their non traditional perspective

electricity capacity in the united states is severely constrained and that constraint is exacerbated by global warming concerns in order to alleviate that constraint new high efficiency technology must be utilized primarily in commercial and industrial applications these technologies would replace a cap and trade tax policy that would be an onerous taxing action to reduce the global warming problem ultimately innovation would free up additional electric capacity

solving the global climate crisis through local partnerships and experimentation global climate diplomacy from the kyoto protocol to the paris agreement is not working despite decades of sustained negotiations by world leaders the climate crisis continues to worsen the solution is within our grasp but we will not achieve it through top down global treaties or grand bargains among nations charles sabel and david victor explain why the profound transformations needed for deep cuts in emissions must arise locally with government and business working together to experiment with new technologies quickly learn the best solutions and spread that information globally sabel and victor show how some of the most iconic successes in environmental policy were products of this experimentalist approach to problem solving such as the montreal protocol on the ozone layer the rise of electric vehicles and europe's success in controlling water pollution they argue that the paris agreement is at best an umbrella under which local experimentation can push the technological frontier and help societies around the world learn how to deploy the technologies and policies needed to tackle this daunting global problem a visionary book that fundamentally reorients our thinking about the climate crisis fixing the climate is a road map to institutional design that can finally lead to self sustaining reductions in emissions that years of global diplomacy have failed to deliver
