the importance of nonparametric methods in modern statistics has grown dramatically since their inception in the mid 1930s requiring few or no assumptions about the populations from which data are obtained they have emerged as the preferred methodology among statisticians and researchers performing data analysis today these highly efficient techniques are being applied to an ever widening variety of experimental designs in the social behavioral biological and physical sciences this long awaited second edition of myles hollander and douglas a wolfe s successful nonparametric statistical methods meets the needs of a new generation of users with completely up to date coverage of this important statistical area like its highly acclaimed predecessor the revised edition along with its companion ftp site aims to equip students with the conceptual and technical skills necessary to select and apply the appropriate procedures for a given situation an extensive array of examples drawn from actual experiments illustrates clearly how to use nonparametric approaches to handle one or two sample location and dispersion problems dichotomous data and one way and two way layout problems rewritten and updated this second edition now includes new or expanded coverage of nonparametric regression methods the bootstrap contingency tables and the odds ratio life distributions and survival analysis nonparametric methods for experimental designs more procedures real world data sets and problems illustrated examples using minitab and statxact an ideal text for an upper level undergraduate or first year graduate course this text is also an invaluable source for professionals who want to keep abreast of the latest developments within this dynamic branch of modern statistics an instructor s manual presenting detailed solutions to all the problems in the book is available upon request from the wiley editorial department

a practical and understandable approach to nonparametric statistics for researchers across diverse areas of study as the importance of nonparametric methods in modern statistics continues to grow these techniques are being increasingly applied to experimental designs across various fields of study however researchers are not always properly equipped with the knowledge to correctly apply these methods nonparametric statistics for non statisticians a step by step approach fills a void in the current literature by addressing nonparametric statistics in a manner that is easily accessible for readers with a background in the social behavioral biological and physical sciences each chapter follows the same comprehensive format beginning with a general introduction to the particular topic and a list of main learning

objectives a nonparametric procedure is then presented and accompanied by context based examples that are outlined in a step by step fashion next spss screen captures are used to demonstrate how to perform and recognize the steps in the various procedures finally the authors identify and briefly describe actual examples of corresponding nonparametric tests from diverse fields using this organized structure the book outlines essential skills for the application of nonparametric statistical methods including how to test data for normality and randomness use the wilcoxon signed rank test to compare two related samples apply the mann whitney u test to compare two unrelated samples compare more than two related samples using the friedman test employ the kruskal wallis h test to compare more than two unrelated samples compare variables of ordinal or dichotomous scales test for nominal scale data a detailed appendix provides guidance on inputting and analyzing the presented data using spss and supplemental tables of critical values are provided in addition the book s ftp site houses supplemental data sets and solutions for further practice extensively classroom tested nonparametric statistics for non statisticians is an ideal book for courses on nonparametric statistics at the upper undergraduate and graduate levels it is also an excellent reference for professionals and researchers in the social behavioral and health sciences who seek a review of nonparametric methods and relevant applications
