this first of its kind title addresses the failures of an often fragmented healthcare system in managing vulnerable patients with multiple chronic co morbid conditions patients who are frequently unresponsive to the methods and approaches used to treat other patients with conditions that are less complicated the book emphasizes a holistic evaluation to patient care that looks at the whole patient providing comprehensive formulations that describe the interacting problems that afflict the patient including elements that are barriers to effective treatment of active medical problems and barriers to recovery the book begins by defining integrated care discussing the types of patients who benefit from this approach and some of the

models of care including financing barriers to acceptance and advocacy for patients the second section discusses the structural elements of integrated care including the building of a team approach issues of leadership and role definition as well as the authors experiences in overcoming some of the problems in the remaining sections the book discusses major complicating features of the patients seen in integrative care settings including a description of the kinds of problems a model for formulation of patient cases and successful approaches to treatment of these problems finally some of the real world applications where integrative care provides better outcomes is covered including in terms of addictions medically complex patients and chronic pain patients integrative medicine for vulnerable populations a clinical guide to working with chronic and comorbid medical disease mental illness and addiction is a major contribution to the clinical literature and will be of great interest to health care professionals administrators policy stakeholders and even interested patients and patient advocates

this volume investigates the history and nature of pain in greek culture under the roman empire 50 250 ce traditional accounts of pain in this society have focused either on philosophical or medical theories of pain or on christian notions of suffering fascination with the pained body has often been assumed to be a characteristic of christian society rather than imperial culture in general this book employs tools from contemporary cultural and literary theory to examine the treatment of pain in a range of central cultural discourses from the first three centuries of the empire including medicine religious writing novelistic literature and rhetorical ekphrasis it argues instead that pain was approached from an holistic perspective rather than treating pain as a narrowly defined physiological perception it was conceived as a type of embodied experience in which ideas about the body s physiology the representation and articulation of its perceptions as well as the emotional and cognitive impact of pain were all important facets of what it meant to be in pain by bringing this conception to light scholars are able to redefine our understanding of the social and emotional fabric of imperial society and help to reposition its relationship with the emergence of christian society in late antiquity
