this book defines over 3 000 terms from the field of education to assist those charged with teaching students to become global citizens in a rapidly changing technological society

John W. Collins and Nancy Patricia O'Brien, coeditors of the first edition of the Greenwood Dictionary of Education published in 2003, have acknowledged and addressed these shifts. This revised second edition supplements the extensive content of the first through greater focus on subjects such as neurosciences in educational behavior, gaming strategies as a learning technique, social networking, and distance education. Terms have been revised where necessary to represent changes in educational practice and theory. The dictionary's focus is on current and evolving terminology specific to the broad field of education, although terms from closely related fields used in the context of education are also included, encompassing the history of education as well as its future trends. The updated second edition will aid in the understanding and use of terms as they apply to contemporary educational research, practice, and theory.

Data Science for Business and Decision Making covers both statistics and operations research, while most competing textbooks focus on one or the other. As a result, the book more clearly defines the principles of business analytics for those who want to apply quantitative methods in their work. Its emphasis reflects the importance of regression, optimization, and simulation for practitioners of business analytics. Each chapter uses a didactic format that is followed by exercises and answers. Freely accessible datasets enable students and professionals to work with Excel, Stata, statistical software, and IBM SPSS. Statistics software combines statistics and operations research modeling to teach the principles of business analytics. Written for students who want to apply statistics, optimization, and multivariate modeling to gain competitive advantages in business, it shows how powerful software packages such as SPSS and Stata can create graphical and numerical outputs.
