this monograph represents a tribute to the late prof karl gschneidner well known as mr rare earth distinguished professor of materials science and engineering at the iowa state university a senior metallurgist at the ames laboratory and the chief scientist of the critical materials institute topics covered include rare earth glass spectroscopy treating skin diseases prospective rare earth applications optical information storage diagnostic imaging nanoparticles in glasses and zno nanomaterials

29th rcssst selected peer reviewed papers from the 29th regional conference of solid state science and technology rcssst 2016 november 15 17 2016 johor bahru malaysia

this volume presents selected papers from kbcs 89 which is the second in a series of annual conferences hosted by the knowledge based computer systems project funded by the government of india with united nations assistance the papers are grouped into sections including ai applications computer architecture and parallel processing expert systems intelligent tutoring systems knowledge representation logic programming natural language understanding pattern recognition reasoning search activities at the kbcs nodal centres

this volume contains the texts of the plenary and contributed papers presented at the 12th international conference on raman spectroscopy at the university of south carolina forty invited contributors explore all aspects of the subject including biological systems semiconductors high tc superconductors nonlinear techniques the solid state and raman techniques and applications this compilation provides a reasonable record of the research activity in the field and documents that raman spectroscopy remains an invaluable technique for use in many of the cutting edge research areas of biology chemistry and physics in fact in many cases the information and data included are difficult or nearly impossible to obtain by any other technique

methods in plant biochemistry volume 1 plant phenolics reviews current knowledge about techniques used in the analysis of the biochemistry of plant polyphenols and their importance in the agricultural and food industries it looks at the application of these techniques in the fractionation of cellular constituents isolation of

enzymes electrophoretic separation of nucleic acids and proteins and chromatographic identification of the intermediates and products of cellular metabolism organized into 15 chapters this book opens with an overview of the general procedures and measurement of total phenolics from detecting phenolic substances in crude plant extracts to determining which classes they belong to and the quantitative estimation of total phenol the reader is introduced to the chemistry structural variation function and distribution of each class of plant phenolics and in a few cases where this is practicable detailed listings of known derivatives are given most chapters focus on chromatographic separations and high performance liquid chromatography hplc along with thin layer and paper rf values with hplc retention times and nmr spectroscopy the book also outlines the procedures for the extraction isolation separation and characterization of different classes of phenolic compounds ranging from phenols and phenolic acids to phenylpropanoids lignins stilbenes and phenanthrenes flavones and flavonols chalcones and aurones flavanoids anthocyanins biflavanoids tannins isoflavanoids quinones xanthenes and lichen substances the book is a valuable resource for students biochemists and researchers in the plant sciences
