the book deals with a powerful and convenient approach to a great variety of types of problems of the recursive monte carlo or stochastic approximation type such recursive algorithms occur frequently in stochastic and adaptive control and optimization theory and in statistical estimation theory typically a sequence x_n of estimates of a parameter θ is obtained by means of some recursive statistical procedure the n estimate is some function of the $(n-1)$ estimate and of some new observational data and the aim is to study the convergence rate of convergence and the parameter dependence and other qualitative

properties of the algorithms in this sense the theory is a statistical version of recursive numerical analysis the approach taken involves the use of relatively simple compactness methods most standard results for kiefer wolfowitz and robbins monro like methods are extended considerably constrained and unconstrained problems are treated as is the rate of convergence problem while the basic method is rather simple it can be elaborated to allow a broad and deep coverage of stochastic approximation like problems the approach relating algorithm behavior to qualitative properties of deterministic or stochastic differential equations has advantages in algorithm conceptualization and design it is often possible to obtain an intuitive understanding of algorithm behavior or qualitative dependence upon parameters etc without getting involved in a great deal of detail

going vegan is the single most important thing you can do if you want to get serious about animal rights yet going vegan isn't always easy when you're young you're living under your parents roof you probably don't buy your own groceries and your friends family and teachers might look at you like you're nuts so how do you do it in this essential guide for the curious aspiring and current teenage vegan claire askew draws on her years of experience as a teenage vegan and provides the tools for going vegan and staying vegan as a teen full of advice stories tips and resources claire covers topics like how to go vegan and stay sane how to tell your parents so they don't freak out how to deal with friends who don't get it how to eat and stay healthy as a vegan how to get out of dissection assignments in school and tons more whether you're a teenager who is thinking about going vegan or already vegan this is the ultimate resource written by someone like you for you

martingale limit theory and its application discusses the asymptotic properties of martingales particularly as regards key prototype of probabilistic behavior that has wide applications the book explains the thesis that martingale theory is central to probability theory and also examines the relationships between martingales and processes embeddable in or approximated by brownian motion the text reviews the martingale convergence theorem the classical limit theory and analogs and the martingale limit theorems viewed as the rate of convergence results in the martingale convergence theorem the book explains the square function inequalities weak law of large numbers as well as the strong law of large numbers the text discusses the reverse martingales martingale tail sums the invariance principles in the central limit theorem and also the law of the iterated logarithm the book investigates the limit theory for stationary processes via corresponding results for approximating martingales and the estimation of parameters from stochastic processes the text can be profitably used as a reference for mathematicians advanced students and professors of higher mathematics or statistics
