china has undergone a protracted stint in the nuclear domain from the time when mao zedong derided the bomb as a paper tiger in 1946 to the development of modern nuclear weapons and missiles making it only obligatory to chronicle the policy changes within china that steered the leadership towards grasping that nuclear weapons will fundamentally redefine china s quest for security the chinese leadership s nationalistic ideology and concepts of force and diplomacy shaped its perceptions of the enduring dangers that confronted china initially beijing s political corridors dismissed the dangers of a nuclear war while reaffirming the principles of a people s war however later witnessed mao recasting the struggle into one with a military technical emphasis that relied on assured nuclear retaliation to ensure effective deterrence with china seeing a massive amount of political guanxi being expended it comprehended that nuclear weapons shall play a fundamental role in its long term aspirations to augment its position and role in global politics given that nuclear arsenals are increasingly viewed as a critical assurance of military supremacy and security this book distils the evolving trends in china s nuclear doctrine and strategy and chronicles the journey of a nuclear china assessing all pertaining facets including a detailed analysis of the delivery vectors that focus on a high degree of mobility of assets particularly the missiles and warheads separately as well as complete weapon systems during the 1960s beijing proceeded with its nuclear weapons programme mindful that it was vulnerable to decapitation and this book s narrative underscores that china seeks to improve the survivability and mobility of its existing strategic nuclear forces through a robust nuclear modernisation campaign including nuclear weapon miniaturisation technology this subsequently leads onto a pressing debate on whether china would aspire to modify qualitatively and quantitatively its nuclear posture without necessarily deposing its brand of nuclear minimalism which has been the core of its nuclear strategy at least for public consumption

often no single field or expert has all the information necessary to solve complex problems and this is no less true in the fields of electronics and communications systems transdisciplinary engineering solutions can address issues arising when a solution is not evident during the initial development stages in the multidisciplinary area this book presents the proceedings of rdecs 2022 the 1st international

conference on recent developments in electronics and communication systems held on 22 and 23 July 2022 at Aditya Engineering College Surampalem India. The primary goal of RDECS 2022 was to challenge existing ideas and encourage interaction between academia and industry to promote the sort of collaborative activities involving scientists, engineers, professionals, researchers, and students that play a major role in almost all fields of scientific growth. The conference also aimed to provide an arena for showcasing advancements and research endeavors being undertaken in all parts of the world. A large number of technical papers with rich content describing ground-breaking research from participants from various institutes were submitted for presentation at the conference. This book presents 108 of these papers which cover a wide range of topics ranging from cloud computing to disease forecasting and from weather reporting to the detection of fake news, offering a fascinating overview of recent research and developments in electronics and communications systems. The book will be of interest to all those working in the field.

Revisions to 5th edition by Zhili Sun, University of Surrey, UK. New and updated edition of this authoritative and comprehensive reference to the field of satellite communications engineering. Building on the success of previous editions, *Satellite Communications Systems*, Fifth Edition, covers the entire field of satellite communications engineering from orbital mechanics to satellite design and launch configuration and installation of earth stations, including the implementation of communications links and the set up of the satellite network. This book provides a comprehensive treatment of satellite communications systems engineering and discusses the technological applications. It demonstrates how system components interact and details the relationship between the system and its environment. The authors discuss the systems aspects such as techniques, enabling equipment, and system dimensioning and state-of-the-art technology for satellite platforms, payloads, and earth stations. New features and updates for the fifth edition include more information on techniques allowing service provision of multimedia content, extra material on techniques for broadcasting including recent standards DVB-RCS and DVB-S2, digital video broadcasting return channel, satellite, and satellite version 2 updates on onboard processing. By offering a detailed and practical overview, *Satellite Communications Systems* continues to be an authoritative text for advanced students, engineers, and designers throughout the field of satellite communications and engineering.
