this report provides an assessment of technology used in manufacturing modular homes in the united states and that used in the german prefabricated wooden home industry it is the first step toward identifying the research needs in automation and manufacturing methods that will facilitate mass customization in the home manufacturing industry within the united states a relatively low level of technology was found in domestic modular home manufacturers raw material transportation was mostly manual manually operated saws sized raw materials cranes were used to move subassemblies and modules were pushed by hand or with a battery powered pusher german prefabricated home manufacturers used closed panels to construct walls roofs and floors rather than modular construction three levels of automation were identified manual semi automated and fully automated manual production methods were similar to those found in the united states in semi automated factories automated machinery was used but an operator was required to manually load unload and start the machine the fully automated factories had equipment capable of machining and transferring panel components and placing

and fastening components together such investment in automation is risky in the cyclic housing industry the modular factory has elevated homebuilding from a craft to mass production but flexibility is reduced and significant customization is difficult future research should examine the cost effectiveness of using high levels of automation software and equipment in the u s homebuilding industry and whether it can profitably provide the manufacturing flexibility for mass customization alternatively the use of lean manufacturing in modular home factories to realize the same benefits needs to be examined

many readers undoubtedly have run crosscut saws in the past and a lot of you know the difference between a good running saw and a poorly filed one a poorly filed saw deserves the name i have often heard attributed to it misery whip a well filed saw however is efficient and can be satisfying to use only in recent years was a chain saw developed that could beat a topnotch buckler in a contest there is a record of a 32 inch douglas fir log cut in 1 minute 26 5 seconds by one buckler saw filers of any quality are becoming very difficult if not impossible to find this manual was written so those of you who use crosscut saws can maintain them yourselves and overcome some of the misery of that ol whip the manual provides a basic description of how and why a crosscut saw works tips on building a saw vise and some experience tested methods as a guide for achieving a well running saw only saws having raker teeth are discussed because they are by far the most common saws found today this includes lance perforated lance and champion tooth patterns

popular science gives our readers the information and tools to improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better
