progress in precambrian geology has been exceptionally great indeed quite striking for geologists of the older generation only some 30 40 years ago the precambrian appeared as an uncertain and even mystic prelude to geologic evolution even the very name precambrian means some indistinct unit in the early history of the earth the beginning of which is poorly known at the same time it was obvious that

the precambrian formations are of extremely varied and complex composition and poor knowledge and lack of reliable methods of division and correlation were to blame for the lack of significant progress in studies of this early evolutionary stage of the planet certainly even at the very start of precambrian studies the results obtained were quite promising lifting as they did the mysterious veil over the regional precambrian but they presented no general realistic picture of this early stage in the earth s evolution at that time recently this situation has completely changed due to new methods of study of the older formations and due also to the refinement of some well known methods in particular of division dating and correlation of silent metamorphic strata application of different isotope methods of dating was most important in providing objective rock age and thereby the age of geologic events recorded in these rocks thus it became possible to reconstruct the oldest geologic period of our planet

the phylontogenic theory proposes an original understanding of nose sinus and midface formation and development by looking back in evolution for the first traces of the olfactory organ and then tracing its successive phyletic transformations to become part of the respiratory apparatus and finally the central point of human facial anatomy von baer s darwin s haeckel s garstang s gould s and buss explorations of parallels between phylogeny and ontogeny help to trace the nose and midface story the paradigm of existing parallels between ontogeny and phylogeny proves useful both in seeking to understand the holoprosencephalic spectrum of facial malformations which represent radically different pathways of facial development after the life s tape has been started to run again and in formulating hypotheses on chordate to vertebrate evolution the phylontogenic theory leads to new medical hypotheses on nose and sinus diseases and opens the field of evolution and development based medicine

metamorphosed sedimentary strata of inferred middle ordovician to early devonian age and sedimentary strata of late triassic age underlie the bristol quadrangle

geological evolution of middle to late paleozoic rocks in the avalon terrane of northern mainland nova scotia canadian appalachians a record of tectonothermal activity along the northern margin of the rheic ocean in the appalachian caledonide orogen

this comprehensive book describes cork as a natural product as an industrial raw materials and as a wine bottle closure from its formation in the outer bark of the cork oak tree to the properties that are of relevance to its use cork is presented and explained including its physical and mechanical properties the industrial processing of cork from post harvest procedures to the production of cork agglomerates and composites is described intended as a reference book this is the ideal compilation of scientific knowledge on state of the art cork production and use presents comprehensive coverage from cork formation to post harvest procedures explains the physical properties mechanical properties and quality of cork addresses topics of interest for those in food science agriculture and forestry
