compiled edited by f william payne natural gas technologies that were new five years ago have now been tested in the real world  
this book describes some of these important technologies covering both new engineering concepts and new products which have  
emerged as well as important innovations to existing technologies many of the chapters include economic analyses which identify  
the resulting cost savings specific areas of development addressed include gas cooling chillers desiccant technologies cogeneration  
heating systems and other natural gas technologies

the seasonal performance model spm was developed to provide an accurate source of seasonal energy consumption and cost  
predictions for the evaluation of heat pump design options the program uses steady state heat pump performance data obtained from  
manufacturers or computer simulation model runs the spm was originally developed in two forms a cooling model for central air  
conditioners and heat pumps and a heating model for heat pumps the original models have undergone many modifications which  
are described to improve the accuracy of predictions and to increase flexibility for use in parametric evaluations insights are  
provided into the theory and construction of the major options and into the use of the available options and output variables specific

investigations provide examples of the possible applications of the model

whilst the uk sales of heat pumps are at present small they are expected to grow steadily especially in areas where natural gas is not available in the next few years as their energy and cost saving possibilities become widely known and as the price of energy increases this digest explains some of the factors to be considered in a domestic heat pump installation and points out some of the

pitfalls for the benefit of building designers specifiers and users not previously acquainted with heat pumps it is concerned primarily with pumps which use the outdoor ambient air as their heat source and which supply their output as hot water however most of the digest is also applicable to machines with warm air output and some of it to those with earth or water heat sources
