list of members in each volume

in 1989 the tribunal was asked to conduct an investigation on how to reduce textile tariffs to levels which would be more in line with those of other industrialized countries the recommendations produced apply to the portions of the textile industry which produce fibres yarns fabrics and certain specialty products and which generally serve as input in the manufacture of other products this volume provides additional information on the tribunal s tariff recommendations for each hs 8 digit tariff item how specific and compound duties were converted to ad valorem equivalents and full lists of specific proposals made for the elimination of tariffs or the accelerated reduction of tariffs under the free trade agreement the second part of the volume covers a variety of issues and factors addressed by the tribunal along with basic information on the background and organization of the inquiry

restricting day length or feed consumption in winter hatched broad breasted white turkeys were studied for their effects on reproductive performance turkey males were either full fed and received 15 12 or 8 hours of light per day or restricted fed and received 15 hours of light per day from 18 through 64 weeks of age dark housed 8 hours of light per day turkey breeder hens were either full fed or restricted fed from 22 to 30 weeks of age at lighting 30 weeks of age the full fed and restricted fed hen groups were randomly divided and full fed either 14 or 18 protein diets through 20 weeks of egg production turkey males exposed to an 8 hour day produced semen with significantly  $p$  less than or equal to 0.05 higher sperm cell concentration over a 30 week collection period than did males receiving 15 hours of light per day a significant decline in semen volume occurred in full fed turkey males receiving 15 hours of light per day while full fed males exposed to 12 or 8 hours of light per day produced increasing semen volumes over the collection period mechanically restricting daily feed consumption by approximately 50% as compared to full fed males in turkey males from 18 through 64 weeks of age resulted in a 30% reduction in body weight restricted fed males produced increasing semen volume over a 30 week collection period with significantly  $p$  less than or equal to 0.05 higher sperm cell concentrations than males full fed and receiving 15 hours of light

per day fertility over a 20 week egg production period was significantly higher  $p$  less than or equal to 0.05 for restricted fed males receiving 15 hours of light per day than for full fed males receiving 15, 12 or 8 hours of light per day. Data presented suggests that the seasonal decline in semen quantity and quality in off season turkey breeder males may be prevented through the use of feed or light restriction.

Addressing the areas of petroleum drilling, production, refining, processing, transportation and equipment and vehicles for sea underwater usage, the journal presents peer reviewed technical papers as well as briefs continued in part by Journal of Offshore Mechanics and Arctic Engineering.
