the crc handbook of thermal engineering second edition is a fully updated version of this respected reference work with chapters written by leading experts its first part covers basic concepts equations and principles of thermodynamics heat transfer and fluid dynamics following that is detailed coverage of major application areas such as bioengineering energy efficient building systems traditional and renewable energy sources food processing and aerospace heat transfer topics the latest numerical and computational tools microscale and nanoscale engineering and new complex structured materials are also presented designed for easy reference this new edition is a must have volume for engineers and researchers around the globe

carbon in earth s fluid envelopes the atmosphere biosphere and hydrosphere plays a fundamental role in our planet s climate system and a central role in biology the environment and the economy of earth system the source and original quantity of carbon in our planet is uncertain as are the identities and relative importance of early chemical processes associated with planetary differentiation numerous lines of evidence point to the early and continuing exchange of substantial carbon between earth s surface and its interior including diamonds carbon rich mantle derived magmas carbonate rocks in subduction zones and springs carrying deeply sourced carbon bearing gases thus there is little doubt that a substantial amount of carbon resides in our planet s interior yet while we know it must be present carbon s forms transformations and movements at conditions relevant to the interiors of earth and other planets remain uncertain and untapped volume highlights include reviews key general topics such as carbonate minerals the deep carbon cycle and carbon in magmas or fluids describes new results at the frontiers of the field with presenting results on carbon in minerals melts and fluids at extreme conditions of planetary interiors brings together emerging insights into carbon s forms transformations and

movements through study of the dynamics structure stability and reactivity of carbon based natural materials reviews emerging new insights into the properties of allied substances that carry carbon into the rates of chemical and physical transformations and into the complex interactions between moving fluids magmas and rocks to the interiors of earth and other planets spans the various chemical redox states of carbon from reduced hydrocarbons to zero valent diamond and graphite to oxidized co₂ and carbonates captures and synthesizes the exciting results of recent focused efforts in an emerging scientific discipline reports advances over the last decade that have led to a major leap forward in our understanding of carbon science compiles the range of methods that can be tapped tap from the deep carbon community which includes experimentalists first principles theorists thermodynamic modelers and geodynamicists represents a reference point for future deep carbon science research carbon in planetary interiors will be a valuable resource for researchers and students who study the earth s interior the topics of this volume are interdisciplinary and therefore will be useful to professionals from a wide variety of fields in the earth sciences such as mineral physics petrology geochemistry experimentalists first principles theorists thermodynamics material science chemistry geophysics and geodynamics
