2 Template

The visual representation of your report; the template determines its layout, formatting, and styling. It acts as the canvas upon which your data is painted.

Report Definition

This file, containing the reports' metadata, acts as the bridge between the Data Model and the Template. It dictates how the data is extracted and transformed for the template.

Choose your data source, such as an Oracle database table containing sales data.

2 Data Model Creation

Define the data structure and relationships within your Data Model. For example, specify tables, columns, and any necessary joins.

3 Template Design

Create a template in RTF format using Microsoft Word. Use placeholders to represent data points from your Data Model.

4 Report Definition Configuration

Link the Data Model and Template using the Report Definition file. This file maps data fields from the Data Model to the corresponding placeholders in the template.

5 Data Extraction and Transformation

BI Publisher processes the Report Definition, extracting and transforming data from the Data Model based on the defined rules.

6 Report Generation

The transformed data is then inserted into the Template, resulting in the final report document.
