this proceedings volume consists of papers presented at the seventh international workshop on computer aided scheduling of public transport which was held at the Massachusetts Institute of Technology from August 5 to 8 1997 in the tradition of alternating workshops between North American and Europe Chicago 1975 Leeds 1980 Montreal 1983 Hamburg 1986 Montreal 1990 and Lisbon 1993 Cambridge Massachusetts USA was selected for the workshop in 1997 as in earlier workshops the central theme dealt with vehicle and crew scheduling problems and the development of software systems incorporating operations research techniques for operational planning in public transport however following the trend that started in Hamburg in 1987 the scope of this workshop was broadened to include topics in related fields two trends underlie this first the recognition that the core scheduling issues in public transport have important common elements with other application areas in which extensive work is also underway and that it is vital to learn from these other initiatives second while scheduling is indeed a core problem in public transport planning and has shown the first and greatest benefits from computer application it is intimately related to the preceding tasks in the planning hierarchy such as service design and the following tasks such as operations control and public information

this book constitutes the refereed proceedings of the 19th international conference on modeling decisions for artificial intelligence MDAI 2022 held in Sant Cugat Spain during August-September 2022 the 16 papers presented in this volume were carefully reviewed and selected from 41 submissions the papers discuss different facets of decision processes in a broad sense and present research in data science machine learning data privacy aggregation functions human decision making graphs and social networks and recommendation and search they were organized in topical sections as follows decision making and uncertainty data privacy machine learning and data science

this book is intended to be a textbook for students of water resources engineering and management it is an introduction to methods used in hydrosystems for upper level undergraduate and graduate students the material can be presented to students with no background in operations research and with only an undergraduate background in hydrology and hydraulics a major focus is to bring together the use of economics operations research probability and statistics with the use of hydrology hydraulics and water resources for the analysis design operation and management of various types of water projects this book is an excellent reference for engineers water resource planners water resource systems analysts and water managers this book is concerned with the mathematical modeling of problems in water project design analysis operation and management the quantitative methods include a the simulation of various hydrologic and hydraulic processes b the use of operations research probability and statistics and economics rarely have these methods been integrated in a systematic framework in a single book like hydrosystems engineering and management an extensive number of example problems are presented for ease in understanding the material in addition a large number of end of chapter problems are provided for use in homework assignments

comprehensive well organized volume suitable for undergraduates covers theoretical computational and applied areas in linear programming expanded updated edition useful both as a text and as a reference book 1995 edition

this volume is intended to expand the dialogue and interest among both practitioners and academicians in a problem area worthy of attention by all the concept of disaggregation admits to our current inability to solve many types of interrelated hierarchical problems simultaneously it offers instead a sequential iterative process as a workable and necessary procedure the papers in this volume are selected from those presented at a disaggregation conference held in march 1977 at the ohio state university we heartily applaud all those who participated in the conference and particularly appreciate the cooperation of those authors whose work is published in this collection part a contains four papers which define the various dimensions of disaggregation the paper by martin starr which was the text of his luncheon address at the conference provides several interesting perspectives to the problem although disaggregation suggests tearing apart as professor starr illustrates with his butterfly example it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies the next paper by lee kra jewski and larry ritzman offers a general model of disaggregation for both the manufacturing and service sectors after reading the papers in this section as well as the papers in subsequent sections you will

identify other dimensions to hierarchical decision making which go beyond this generalized model

this book addresses the problem of inferring the state of the ocean circulation from a mathematical perspective

since the publication of the first edition in 1987 Winston's text has become increasingly popular because of its easy to follow format its many examples and problems and its emphasis on model building and model formulation skills the text includes comprehensive coverage of all areas of operations research and management science

a completely self contained treatment of management fundamentals including text case applications class exercises and career perspectives a complete course and supplemental ancillaries in a single text designed for a first course in principles of management this revised and updated edition introduces the traditional management functions planning organizing leading and controlling with a strong ongoing emphasis on productivity changes include new end of chapter cases new career perspectives and four new extensive case studies

formulation chemists and engineers along with their research managers have long known the difficult nature of formulation problems this book is a manual to help them to identify key issues design efficient experiments and develop math models to resolve conflicting objectives specific solved examples co authored by chemists show how well these methods work on industrial strength problems and document the power and efficiency of computer aided formulation this book is the first one to combine techniques of operations researching decision science and statistics to solve formulation problems readers will appreciate its chapters on experimental design which are easy to read and enjoyable

although this textbook is intended for use in a two semester sequence of courses introducing the mathematical methods of operations research part i can also be used alone for a one semester course on linear programming the authors have chosen to provide deep and thorough coverage of the most important methods in operations research rather than a superficial treatment of a larger number of topics the level of exposition is appropriate for juniors and seniors who are majoring in engineering computer science mathematics and quantitative methods in management a solutions manual is available to qualified instructors
