this is the tool for gaining and maintaining innovation capacity

the most important theme of the discourse on sustainable development and sustainability challenges concerns the relationship between innovation and sustainability this book represents a realistic critical overview of the state of affairs of sustainable innovations offering an accessible and comprehensive diagnostic point of reference for both the academic and practitioner worlds in order for sustainable innovation to truly become mainstream practice in business it is necessary to find out how organizations can strategically and efficiently accommodate sustainability and innovation in such a manner that they accomplish value capturing for firms stakeholders and for society not merely creating a return on the social responsibility agenda addressing this challenge the book draws together research from a range of perspectives in order to understand the potential shifts and barriers benefits and outcomes from all angles inception strategic process and impact for companies and society the book also delivers insights of open innovation in public sector organizations which is not so much a process of invention as it is one of adoption and diffusion it examines how the environmental pillar of the triple bottom line in private firms is often a by product of thinking about the economic pillar where cost reductions may be achieved through process innovation in terms of eliminating waste and reducing energy consumption the impact of open innovation on process innovation and sustainable process innovation in particular is an underexplored area but is examined in this book it also considers the role of the individual entrepreneur in bringing about sustainable innovation entrepreneurs their small and medium sized enterprises smes as well as the innovation ecosystems they build play a significant role in generating sustainable innovations where these smaller organizations are much more flexible than large organizations in targeting societal needs and challenges the readership will incorporate phd students and postgraduate researchers as well as practitioners from organizational advisory fields

the aim of this edited book is to provide a comprehensive overview of the opportunities and challenges related to innovation for sustainability combining work from both emerging and established scholars in different academic

society and policy makers demand innovation systems oriented towards several goals of sustainable development therefore recent literature has dedicated a growing interest to both innovation and sustainability in the pursuit of environmental economic and social development in addition the emerging topic of sustainable innovation and eco innovation seems to combine the main features of them the definition of these concepts has been significantly changed during the last decades and a broad discussion continues today about which indicators should be used to measure innovation sustainability and their combination the current paper investigates this relationship and in the authors opinion the research question connected to the impact of the innovative product and service and process solutions on sustainability can be addressed by means of a stable theoretical framework to study the interaction between innovation and sustainability the usage of specific territorial features might represent a useful perspective to manage short and long term environmental and economic issues as for the theoretical model the present article considers a specific technique suitable for investigating the entire set of characteristics involved in the model from a public makers and managerial point of view the possibility of improving the firm efficiencies in terms of several dimensions of sustainable innovation represents a relevant topic that must be encouraged

how sustainable is innovation problematically most contemporary patterns of innovation in human social systems and organisations are not sustainable this prevents people from learning effectively from recognising and solving their problems and from operating in sustainable ways it is arguably why societies businesses and industries around the world are so unsustainable sustainable innovation is a pattern of social learning and problem solving that is itself sustainable the sustainability of innovation moreover is linked to the sustainability of its outcomes which manifest themselves in what people produce and do in the world sustainable innovation then is a necessary precondition for sustainability in how societies and organisations function the ways they organise the products and services they make the energy and resources they use and the wastes they produce as challenges such as demographic pressures ethnic tensions terrorism global poverty pandemics and abrupt climate change force their way into mainstream politics and business so we see growing interest in innovation entrepreneurial solutions and critically issues such as how to ensure successful solutions replicate and scale sustainable innovation aims to illustrate that shift instead of simply focusing on environmental and technological matters it views and evaluates innovation for sustainability in terms of the human social and management challenges and responses it argues that a just efficient and sustainable balancing of these elements is best achieved by the development of new knowledge and by the evolution of better means both of embedding that emerging knowledge in organisations and institutions and of managing the relevant flows of information knowledge and wisdom the book stresses that claims that a particular product production process or service are sustainable usually assume that an appropriate balance has been achieved between people planet and profit however calculating the sustainability of such things let alone of complex systems such as enterprises or economies can be impossible instead of sustainability the book favours the use of terms such as making sustainable emphasising that in dynamic operating environments organisational processes are changing constantly whether or not they are under effective strategic control by management innovation too is dynamic by definition sustainable innovation argues that there must be a constant focus on the triple bottom line of economic social and environmental value creation during the innovation process sustainable innovation is a new challenge for organisations it is a process that should permeate the whole organisation in terms of its members its tasks its coordination mechanisms and its procedures waste or pollution should not be seen as the reason for further intervention downstream but as an end of the pipe effect which could be organisationally cured upstream developed from the dutch research programme knowledge creation for sustainable innovation this book presents empirical research and cases to develop a theory of sustainable innovation that is based on management of knowledge knowledge and cognition and innovation approaches sustainable innovation suggests that knowledge and innovation will be the key drivers of social and corporate sustainability in the years ahead it will be essential reading for managers and researchers in areas such as sustainability innovation knowledge management and organisational learning

sustainability is a phenomenon that must be pursued in a complex system of interrelated elements of business society and ecology it is important to gain an understanding of these elements the interplay between them and the behavior of the system this book explores the business societal and ecological system in which sustainable innovation has to be envisioned conceptualized realized and improved author bart bossink offers insight into the systematic coherence of drivers of eco innovation and sustainability utilizing a three part approach 1 eco and sustainable innovation in business is based on ideas and people who cooperatively develop these ideas 2 groups of people organized in commercial firms must realize these ideas cooperatively and create the innovations that can conquer the market and 3 that people from governmental non governmental not for profit research and commercial organizations can build institutional arrangements that stimulate these sustainable innovations changing both industry and society adopting a managerial perspective and discussing concepts and methods to manage eco innovation in business this book highlights the interrelated roles of the individual the firm partnerships and business environments researchers and practitioners who want to combine a commercial and economical approach with an ethical and social ambition to create an ecologically sustainable firm stand to learn much from these pages

a number of arguments are made by an international group of authors in this though provoking book about an understudied and socially important context a future in which financial wealth transfers across the north south divide from richer to poorer countries is far from sufficient for the relief of poverty and the pursuit of sustainability caution must be taken when growth is achieved through the liquidation of the natural wealth of poorer nations in order to maintain a global economic status quo neither poverty reduction nor sustainability will ultimately be achieved the financial collapse and social upheaval that might result will make the most recent economic downturn look trivial by comparison what is more urgently needed instead as argued in this book is collaboration for sustainability and innovation in the global south especially building on models originally developed in the south that are transferable to the north in pursuit of a sustainable and more equitable future the book examines such topics as cross border innovation in south north fair trade supply chains potential pollution prevention programs in bangladesh digital literacy and social inclusion in the south through collective storytelling and eco innovation at the bottom of the pyramid many of these stories and have not been told and need greater visibility the book contributes in a meaningful way to the discussion of how innovation and sustainability science can benefit both sides in south north innovation collaborations it provides useful introduction to the topics as well as valuable critiques and best practices this back and forth flow of ideas and innovation is itself new and promising in the modern pursuit of a fair and sustainable future for all regions of our planet
