the first purpose of this book is to provide a comprehensive review of the state of development of natural analogue studies with emphasis on those studies which are relevant to the following repository designs nagra switzerland disposal concepts for high level

waste low and intermediate level waste skb sweden disposal concepts for spent fuel low and intermediate level waste and nirex uk disposal concept for low and intermediate level waste the book s second aim is to discuss the expanding application of natural analogues for non performance assessment purposes especially their potential for presenting the concept of geological disposal to various interested audiences in a coherent understandable and scientifically legitimate manner much of the discussion of the book is relevant to concepts for geological disposal of radioactive wastes by other countries and is concerned only with those physico chemical processes which control the release of radionuclides from the near field and their subsequent retardation and transport in the geosphere

many countries are currently exploring the option to dispose of highly radioactive solid wastes deep underground in purpose built engineered repositories a number of surface and shallow repositories for less radioactive wastes are already in operation one of the challenges facing the nuclear industry is to demonstrate confidently that a repository will contain wastes for so long that any releases that might take place in the future will pose no significant health or environmental risk one method for building confidence in the long term future safety of a repository is to look at the physical and chemical processes which operate in natural and archaeological systems and to draw appropriate parallels with the repository for example to understand why some uranium orebodies have remained isolated underground for billions of years such studies are called natural analogues this book investigates the concept of geological disposal and examines the wide range of natural analogues which have been studied lessons learnt from studies of archaeological and natural systems can be used to improve our capabilities for assessing the future safety of a radioactive waste repository
