I Anatomical Considerations The aesthetic of the classical Greek ideal emphasizes several key muscle groups Upper Body Emphasis is placed on the latissimus dorsi lats trapezius traps deltoids shoulders pectoralis major chest and biceps brachii triceps brachii arms A Vtaper achieved by a wide back and narrower waist is a hallmark of this physique Lower Body While not as overtly emphasized as the upper body strong legs are essential for overall balance and strength Quadriceps hamstrings and gluteus maximus development are important but often receive less training volume compared to the upper body in programs focused on this aesthetic

II Training Program Design A successful Greek God program should incorporate principles of progressive overload periodization and targeted muscle hypertrophy We propose a sample 4day split focusing on compound movements to maximize muscle growth and hormonal response
