most of us spend a fair amount of time trying to avoid responsibility that s not too astounding what is surprising says peter french is that we tend to dodge the good variety as well as the bad

formal ethics is the study of formal ethical principles the most important of these perhaps even the most important principle of life is the golden rule treat others as you want to be treated although the golden rule enjoys support amongst different cultures and religions in the world philosophers tend to neglect it formal ethics gives the rule the attention it deserves modelled on formal logic formal ethics was inspired by the ethical

theories of kant and hare it shows that the basic formal principles of ethics like the golden rule are very similar to principles of logic and gives a firm basis for our ethical thinking as an introduction to moral rationality formal ethics also considers non formal elements and is applied to areas of practical concern such as racism and moral education

this is your brain isolated from the world inside your skull your senses provide its only clues to what s going on out there but how can your brain take the limited information from your senses to build your trust worth reality why your brain is constantly being fooled by what you see what we re trying to is not the world as it is but something else we are actually generating perspirations of a world that s useful to see and that useful perception doesn t actually have to correspond with what s actually there when you open your eyes right first time in the morning say do you think you see the world as it really is it has to do with how your brain uses shadows to make decisions about what it s seeing take a look at any object one glance and you know what it is but how do you know what it is and where it is positioned in space the light reflected this object is converted by your eyes into an electrical signal and is send down a neurological pathway called the optic nerve to the back of your brain starting in the region called the visual cortex the image is cross referenced with memory of past experiences started through your brain as you try to identify the object once it s figured out what it is your brain has to decide how the object is positioned in the space and one of its most reliable tool is use shadows in a world with a single light source your brain has learned to trust shadows as a near fool proof way to know the behavior of objects in space and in general it worked your brain using past experiences to generate its perception of the world
